April 29, 2024

## Work Planned for Your Neighborhood

You are receiving this newsletter because sewer lining work is scheduled for your neighborhood.

## Project Schedule

Commence:

Cleaning May 2024

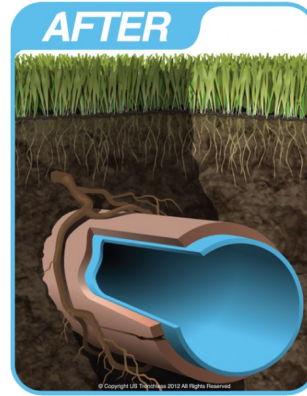

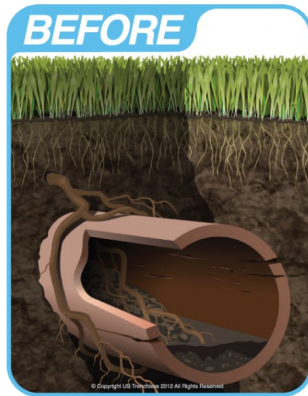

Completion:

Lining June 2024

## Questions?

Village of Lombard  
Project Manager  
Brendan Huizinga  
Civil Engineering Technician  
Lombard Public Works

## FAQs: The Sewer Lining Program

**What is the Sewer Lining Program?**  
Public Works annually contracts the Cured-In-Place Pipe (CIPP) lining of various sanitary sewers throughout the Village.

**What is the benefit of the lining process?**  
Lining requires no excavation and limits the interruption to sanitary sewer service. Ultimately, lining improves the structural and operation properties of the existing pipe to that of a new pipe.

**Why and how is lining done?**  
Public Works regularly cleans and televises sewers through out the Village. Sewers found to have structural and or operational issues that can be rectified by the CIPP process are identified.

CIPP lining requires the contractor to pull a fiber sock liner through the sewer pipe with steam, water, or air. Under pressure, the liner clings to the side of the pipe. The CIPP then hardens, cures, and forms a fiberglass-like shell coating against the wall of the existing pipe. The liner thus becomes a pipe within a pipe.

**Who is doing the work?**  
Sanitary sewers in your neighborhood will be cleaned, televised and lined by Performance Pipelining, Inc. of Ottawa, Illinois.

**How long will this process take to complete?**  
The process is done in two phases. During the first phase a crew will clean and prepare the sanitary sewer mainline. The second phase involves lining the pipe and "tapping" each house service connection. This returns normal sewer service back to the building.

**How will I know when the Village is lining the sewer in front of my house?**  
Residents should look for a door hanger a day or two before the work is scheduled to begin. The notice will be placed on the front door. Updates on the progress will be shared through NotifyMe. Sign up for texts/e-mails at [villageoflombard.org/notifyme](http://villageoflombard.org/notifyme).

Instructions will include refraining from producing excess waste water. Please hold off doing laundry and using the dishwasher for approximately 24 hours. Use the shower/bathtub sparingly for that same 24 hours.

**What areas in Lombard will be affected?**  
Work will take place in the vicinity of Ann Street (just west on Main Street), South Park Avenue (between St. Charles Road and McGuire Drive), West Wilson Avenue (by the intersection of Edson and Wilson Avenues intersection), the 300 block of South Lewis Avenue and on East Roosevelt Road. To view locations for this job and other 2024 construction projects visit [villageoflombard.org/constructionmap](http://villageoflombard.org/constructionmap).

**Who do I contact if I have questions or concerns?**  
Call Public Works (630) 620-5740 between 8 a.m. - 4:30 p.m., Monday - Friday. After hours, please leave a message for Public Works Administration and your call will be returned the next business day. **If your after hours call is an emergency, press zero, and your call will be re-directed to the Police Department.**

## Preparing For the Sewer Lining Program

### How might the lining process affect me?

The contractor will not need to enter a private home or business. Public Works personnel will be monitoring the progress of the work. During the lining process, sewer lines can develop air pressure or a partial vacuum. Excess air pressure or vacuum usually will dissipate through the plumbing vents. Occasionally, facilities with inadequate plumbing vents (i.e. no vents, undersized vents, or obstructed vents) may experience air pressure that can escape through toilets, floor drains, sinks, tubs, or shower drains, causing water to splash out. Vacuums can also draw water out of the fixture traps, resulting in a temporarily unpleasant odor.

### Is there anything I can do to prepare for the lining program?

During the televising, please keep toilet lids down. To help minimize any potential odors, pour a gallon or two of water into your basement floor drains. By routinely keeping traps full of water, sewer odors can be prevented from entering your home.

### What if there is an odor after the work is done?

If you sense any "plastic" odors after the sewers have been cleaned and flushed, run some water down the sink and bathtub drains, flush toilets, pour some water into each basement floor drain, and open windows. After a short time, the odor should disappear. If the odor remains detectable for a prolonged period, please contact the Public Works Department.
